Release v1.0.0

First, thank you for using this template! For the better use experience please follow these rules:

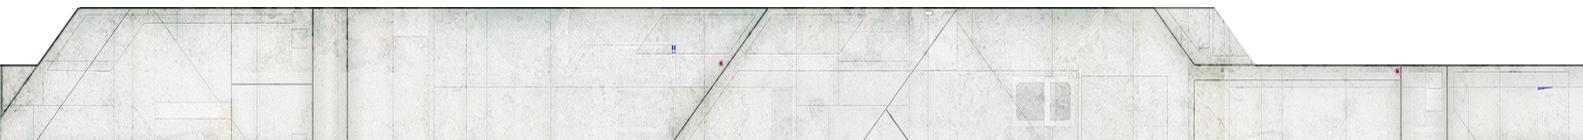

- Write only one **sentence each line**. This will help with the automate merging procedure and with the error tracking.
- When you add new sections to the document, please edit only the `main.tex` file.
- All your text go in the `text` folder.
- All your images go in the `img` folder.
- If you want to edit the template, explore the `template` folder.
- To change the language of the document, change the first line of the file `main.txt`.

Edit the first page

In the current release, the first page is a simple image file (`img/wallpaper.jpg`) with the following size:

- height: 297mm (2790pixel)
- width: 210mm (2100pixel)

Since the document is an **A4 paper** format this image fit the whole document space. To avoid problems, you have to replace this image with another maintaining the same size. In a future release this is going to change.

Credits

I want to thank the Dna Corporation's Developers to let me use this template!
